Compression, in plain sight.

PNG: lossless image coding; transparency can be retained.

JPEG: image quality and file size trade off against each other.

TIFF: a container that can hold multiple image pages.

PDF: image-heavy pages often benefit from downsampling.

SHA-256: identical hashes are used to identify exact file content.

pHash: resized or slightly edited images can remain similar.

Entropy: a byte histogram does not capture byte order.

Version Vault: shared chunks are stored once across revisions.

Artifact Lens: SSIM is a metric, not a quality percentage.

Text-only PDFs may already be compact. Size reduction is not guaranteed.

Synthetic demonstration document. No external assets.
